

Super Yacht Berths

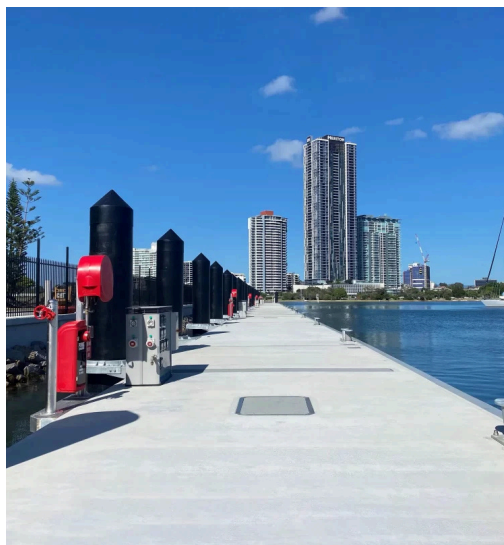

Product Guide

Product Highlights

- Tried and proven high impact resistant system
- Mega Elite Pontoons - 5-sided marine grade concrete
- High individual mass to provide more stability, high freeboard, supersized components
- Heavier, reinforced gangways rated for heavy vehicle and golf cart access
- Custom designed direct connect power pedestals to suit international vessels
- Low maintenance
- Heavy duty commercial D fender

The Superior Mega Elite Pontoon System is a proven superyacht product that provides an outstanding solution to suit the unique requirements of super and mega yachts which are now larger in length, width, and height than ever before and require deeper water with ample turning space.

Product Guide

Technical Specifications

- 5-sided 50 MPA marine grade concrete with more to areas where structurally required
- Reinforcing mesh in concrete deck and wall provides longer overall design life
- Pontoon base with fully welded PE base liner system
- Large diameter pontoon to pontoon stainless steel connector bolts
- pontoons can handle high concentrated wave/vessel loads and transfer the loads through the mooring system
- Stainless steel fittings for all connections

With a high freeboard to suit large vessel requirements and an excessive deck loading allowance, the massive concrete pontoons are designed with heavy reinforcement and large displacements. The pontoon base has a large diameter coupler system that is cast integrally to the pontoon and heavily reinforced to transfer the loads.
